Design Project II
EGR314 Spring 2026**

The Crop Scout is a ground based, remote operated, sensing and exploration drone. The Scout is capable of metal detection, soil and air temperature monitoring, humidity sensing, pressure sensing, and remote object manipulation. All data is relayed to the user via an MQTT connection between the remote control and the Crop Scout.

- Steerable Rover w/ 4 wheels
- Controllable Front Arm
- Battery-Powered
- Able to sense environment and specific target
- Pressure sensor works as a safety mechanism for arm
- Holdable Controller w/ control buttons
- Wireless Connection to Controller
- Controller Screen shows info
- User selected units for sensor data
- Error detection and correction
